

Training from the Back of the Room

How our brain works during the learning process. Designed to guide teachers to design and deliver training that really helps students learn.

TBR describes six aspects (the 6 Trumps) to improve training:

Movement trumps sitting.

Writing trumps reading.

Talking trumps listening.

Shorter trumps longer.

Images trumps words.

Different trumps same.

As well as four types of actions (the 4 Cs) that are included when designing training activities:

C1: Connections

Students make connections with what they will learn, with what they already know, with classmates, etc.

C3: Concrete Practice

Students apply the information acquired.

C2: Concepts

Students acquire new information.

C4: Conclusions

Students summarize what they learned.

At Netmind, we apply the principles and practices of TBR when designing all of our courses and training activities.
